

**Oceanair
'10 Years of Service'
Prize Draw Winner**

Gino Fantoni receives his prize from Oceanair's MD Richard Tyson

To celebrate Oceanair's 10 years of service we ran a prize draw over the summer months of 2009 for our loyal customers as a 'Thank you.'

Our lucky winner, Gino Fantoni, chose the 10 year old malt whiskey! Gino's company is 'tag 2 ltd'; an independent Building Services Design Consultancy. Tag 2 Ltd provides clients with a wide range of fully co-ordinated mechanical and electrical building services, design and project management services to meet the growing demands of modern buildings and the ever changing environment.

Discount available for those travelling more than 70 miles

**SANYO Launch New
ECOi VRF 6 Series!**

The exciting new range of ECOi 6 series is due to be launched at Mostra Exhibition, Italy next month. It has been developed to lift SANYO back to the top of the tree for efficiency and class leading.

Key features of this new series are:

- Up to 20hp in one single unit (8,10,12,14,16,18,20)
- Up to 60hp in a system
- Up to 64 connectable indoor units (even from 38hp)
- 4 sizes of high COP units (10,12,14,16))
- Industry leading efficiency level

**First SANYO R22 renewal
installation in the UK**

Oceanair's customer Taprex have been the first in the UK to install a renewal R22 split installation.

This particular case was using a 15m pipe run which was completely inaccessible which is why the existing pipework had to be used. With this in mind the R22 replacement technology came into its own and an old ducted TRANE heatpump using R22 refrigerant was quickly replaced by a SANYO 10.1Kw ducted system using 410A refrigerant!

Since this first project the take off for R22 renewal has exceeded our initial expectations.

REMINDER—SANYO VRF Renewal technology utilises its standard range of VRF equipment and does not require any specific or different outdoor units eg:-

*10hp system is replaced with one 10hp outdoor unit
Cost effective and easy!*
