

Oceanair's Technical Support

Neil Hopgood, Technical Engineer

Many of you will have spoken to our technical engineer Neil Hopgood; he is constantly kept busy with both 'on the phone' troubleshooting and support as well as 'site visits'. Neil has been with Oceanair since 2004 and forms a very important cog in our 'good service' remit.

If you are really stuck and cannot solve your issues over the phone Neil is available for 'on-site' support at a charged daily rate. Please call our offices for more details on this service.

SANYO CO2 Training Courses

Moving into the new year we have two further dates available for training on SANYO's unique CO2 air to water heat pump system as follows:

Tues 12th Jan - Sanyo offices
Tues 16th Feb - Sanyo offices
Course fee £250 + vat per person

Contact **Kate** on 08456 590022 or kate@oceanairdist.co.uk for further details.

SANYO introduce their R22 renewal system

SANYO's R22 renewal system offers ac operators an upgrade from R22 kit whilst keeping the existing pipework.

You will undoubtedly know that R22 will no longer be able to be used to top up refrigeration and air conditioning systems from this month which potentially exposes some 100,000 systems in the UK which are still reliant on R22.

In reponse to this SANYO have developed the technology to enable rapid conversion of existing R22 systems to new high-efficiency R410A systems at a cost dramatically less than complete new installations. By using existing pipework, installations can be sped up and replacement costs cut by up to 30% according to SANYO. This replacement system can be used with existing SANYO systems **OR** virtually all types of other R22 systems.

Contact our offices on 08456 590022 for further information..
