

SANYO Multiple VRF Install for the Holiday Inn

The new Holiday Inn in Winchester has utilised an effective combination of Sanyo's products to obtain the very best conditions for its residents. The system comprises of both Electric and GHP systems (utilising hot water recovery for the restaurant).

In addition the hotel has made use of Sanyo's ultra quiet 'US ducted' models in the bedrooms to give an all round efficient and comfortable air conditioning system with smooth operation through a complicated selection of 'bems' controls.

Supplied by Oceanair, this impressive system was installed by J&B Hopkins of Fareham (01489 584706) whom we thank for the photography.
